

Compatibilities

WireView PRO

Graphics cards that are not listed should be considered incompatible. The compatibility lists for our products are updated regularly.

In the case of the 90° WireView Pro GPU, make sure that all connectors are fully and correctly plugged in. There must be no gap between the connectors (see image).

If a graphics card is not listed, you can check its compatibility using the PDF file with dimensions available in the download section on the product page in the TG-Shop. Please also refer to the note in the product description. As a general rule: If the 12VHPWR connector of the graphics card is flush with the cooler, the 90° WireView Pro GPU should be usable.

If you have any questions regarding product compatibility, our customer service team will be happy to help.
